PETITION TO WITHDRAW ABANDONMENT DUE TO PTO ERROR (\$1.181)

Dear Sir:

Applicant's attorney was notified by the Examiner on March 11, 2004 that a response to the Office Action dated July 29, 2003 was never received. The Examiner requested that we send this request facsimile to the general facsimile number. Applicant filed a response to the Office Action dated July 29, 2003, on November 26, 2003, as evidenced by the attached transmittal form, certificate of mailing and a Petition for one month extension of time. Applicant also encloses a copy of the return postcard that was date stamped as being received in the U.S. Patent Office on December 1, 2003. Per the Examiner's request, a signed Statement of Personal Knowledge by Patricia O'Donoghue Regarding First Class Mailing is enclosed stating that the response was mailed via first class mail on November 26, 2003. Applicant respectfully petitions the Commissioner for Withdrawal of Abandonment and Reinstatement of the Application since Applicant timely filed a response that was apparently lost.

In the alternative, if abandonment is not deemed due to U.S. Patent Office error, Applicant attaches hereto a Petition for Revival of an Application for Patent Abandoned Unintentionally Under 37 CFR 1.137(b).

A fee transmittal authorizing payment of the requisite fee is attached herewith.

Applicant's attorney signing below has made the statements above based on personal knowledge of the facts surrounding the abandonment.

Respectfully submitted,

Date: 3-24-04

**AMENDMENT AND RESPONSE**

In response to the office action mailed July 29, 2003, please amend the above-  
identified application as follows:

In the Claims:

Please amend claim 2 and add new claims 17, 18, 19, and 20 as follows:

1. (Previously Amended) A method of transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine in which the at least two sheets are moved at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the method comprising the following steps:

(a) supplying the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

(b) decelerating the second sheet to a third speed as soon as the first sheet is decelerated to the first speed in the sheet handling machine, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets.

2. (Currently Amended) A method according to claim 1, wherein a leading edge of the first sheet in the sheet transport direction and a leading edge of the second sheet [which is the leading edge] in the sheet transport direction are displaced relative to one another [an-other] by the length of displacement, the first sheet being decelerated at the leading edge thereof and the second sheet being decelerated at a [an] rear edge in the sheet transport direction.

3. (Previously Amended) A method according to claim 1, the method comprising the following steps:

(c) advancing the at least two sheets in the sheet handling machine by a distance which is determined by the sheet format and the length of displacement; and

(d) repeating steps (a) to (c) for an additional pair of sheets arranged in a shingled mode of arrangement in the sheet transport direction.

4. (Original) A method according to claim 3, wherein the additional pair of sheets is deposited in the sheet handling machine shingled in an ascending or descending mode.

5. (Previously Amended) A method according to claim 1, wherein the first speed is 0.25 m/s, the second speed is 3 m/s, and the third speed is 2 m/s.

6. (Previously Amended) A method according to claim 1, wherein the third speed is equal to the first speed.

7. (Previously Amended) A device for transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine which comprises a first transport unit which moves the at least two sheets at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the device comprising:

a feed roll which feeds the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

a brake roll which decelerates the second sheet to a third speed as soon as the first sheet is decelerated by the transport unit, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets.

8. (Previously Amended) A device according to claim 7, wherein the transport unit comprises a first shingle roll which engages the edge of the first sheet constituting the leading edge in the sheet transport direction, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the edge of the second sheet constituting the trailing edge in the sheet transport direction.

9. (Previously Amended) A device according to claim 7, wherein the transport unit comprises a substantially continuously driven conveying belt and a plurality of shingle rolls which are pretensioned towards the conveying belt and which are spaced apart in the sheet transport direction by a distance determined by the sheet format and the sheet displacement.

10. (Previously Amended) A device according to claim 7 comprising a trap, which is arranged between the feed roll and the first shingle roll, the trap causing descending shingles of sheets in a first position and ascending shingles of sheets in a second position.

11. (Previously Amended) A device according to claim 10, wherein the brake roll is associated with a first sheet path along which the at least two sheets travel when the trap is at the first position, an additional brake roll being provided, which is associated with a second sheet path along which the at least two sheets travel when the trap is at the second position.

12. (Previously Amended) A device according to claim 7, wherein the sheet handling machine comprises:

a second transport unit, which is arranged after the first transport unit in the sheet transport direction, the first transport unit collecting the sheets continuously and transferring them to the second transport unit, when a predetermined number of sheets is arranged in the first transport unit, the sheets in the second transport unit being arranged in a shingled mode of arrangement in a sheet transport direction in such a way that the leading edges of the sheets in the sheet transport direction are spaced apart by a certain length of displacement, the second transport unit moving the sheets in a clocked mode in such a way that the sheets are displaced by a predetermined distance in the sheet transport direction, the distance depending on the number of sheets to be distributed and on the sheet displacement; and

a distributing unit which, when the sheets move in the transport unit, discharges from the sheet handling machine the respective leading sheet in the sheet transport direction.

13. (Previously Amended) A device according to claim 7, wherein the paper handling machine comprises:

a second transport unit which is arranged such that it extends parallel to the first transport unit,

a deflection means which is arranged in front of the first and second transport units when seen in the sheet transport direction and which conducts sheets to the first transport unit when occupying a first position and sheets to the second transport unit when occupying a second position, the deflection means switching over from the first to the second position, when a predetermined number of sheets has been received in the respective transport unit, and

a distributing unit arranged after the first and second transport unit when seen in the sheet transport direction,

wherein the transport unit having no sheets supplied thereto moves the sheets in a clocked mode in such a way that the sheets are displaced by a predetermined distance in the sheet transport direction, the distance depending on the number of sheets to be distributed and on the sheet displacement;

wherein, when the sheets are being moved, the distributing unit discharges from the paper handling machine the respective leading sheet in the sheet transport direction.

14. (Previously Amended) A device according to claim 12, wherein the second transport unit comprises a conveying belt and a plurality of transport rolls which are pretensioned towards the conveying belt and which are spaced apart in the sheet transport direction by a distance determined by the sheet displacement and by the sheet format.

15. (Previously Amended) A device according to claim 12, wherein the distributing unit includes a counter which detects the number of sheets distributed.

16. (Previously Amended) A device according to claim 7, wherein the third speed is equal to the first speed.

17. (New) A method of transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine in which the at least two sheets are moved at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the method comprising the following steps:

(a) supplying the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

(b) decelerating the second sheet to a third speed as soon as the first sheet is decelerated to the first speed in the sheet handling machine, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets,

wherein a leading edge of the first sheet in the sheet transport direction and a leading edge of the second sheet in the sheet transport direction are displaced relative to one another by the length of displacement, the first sheet being decelerated at the leading edge thereof and the second sheet being decelerated at a rear edge in the sheet transport direction.

18. (New) A device for transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine which comprises a first transport unit which moves the at least two sheets at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the device comprising:

a feed roll which feeds the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

a brake roll which decelerates the second sheet to a third speed as soon as the first sheet is decelerated by the transport unit, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets,

wherein the transport unit comprises a first shingle roll which engages the edge of the first sheet constituting the leading edge in the sheet transport direction, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the edge of the second sheet constituting the trailing edge in the sheet transport direction.

19. (New) A method according to claim 1, wherein, in step (b), the first sheet is decelerated to the first speed by a shingle roll, and the second sheet is decelerated to the third speed by a brake roll.

20. (New) A device according to claim 7, wherein the transport unit comprises a first shingle roll which engages the first sheet, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the second sheet.

### REMARKS

The Applicants respectfully traverse and request reconsideration. Applicants wish to thank the Examiner for the notice that claims 2-4 and 8-15 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. Support for new claim 5, 17-20 may be found at least on p.3, ¶¶ 2-7; p. 9, ¶¶ 3 and 4.

Claims 1, 5, 6, 7 and 16 stand rejected under 35 U.S.C. § 103(a) as being obvious based on U.S. Patent No. 5,158,278 (Auf der Mauer). However, Auf der Mauer does not suggest the transferring of at least two shingled sheets to a sheet handling machine in a manner as defined by the pending claims.

The present invention is concerned with the transferring of at least two shingled sheets to a sheet handling machine wherein the sheets in the sheet handling machine are moved at a first speed after the transfer. As to Claim 1, in the first step the two sheets are supplied with a second speed, which is higher than the first speed. In the second step the second sheet is decelerated to a third speed as soon as the first speed is decelerated to the first speed in the sheet handling machine. In other words, it is clear from the wording of claim 1 that decelerating the two sheets occurs in a manner, which is substantially simultaneous.

Additionally, claim 7 recites three sheet engagement means, the first being the feed roll which feeds the sheets with a second speed, the second being the transport unit which decelerates the first sheet once it arrives at the sheet handling machine, and the second being the brake roll which, as soon as the first sheet is decelerated by the transporting unit, decelerates the second sheet to the third speed.

Accordingly, Auf der Mauer fails to teach among other things transferring the shingled sheets to the sheet handling mechanism in a manner such that the sheets still remain shingled whereas the present invention teaches to substantially simultaneously decelerate the first and second sheets, an approach, which is not taught by Auf der Mauer.

In contrast, Auf der Mauer describes with regard to Figs. 4-7 the steps to be taken for forming a gap in a flow of shingled products 48, and for the subject matter of the present invention the actions taken at the inlet of the handling mechanism 14' is of specific interest, and here especially Fig. 6. As it is described in columns 11 and 12, performing a gap in the flow of products 48 a part of the products is slowed down and the other one is conveyed by

means of conveyor belt 28 at a second speed which is about 20 percent higher than the first speed at which the conveyor 14' operates. As it is outlined in column 12, lines 56-64, the products 48 delivered by the endless conveyor belt or band 28 at the second speed v2 to the conveyor 14' are braked down to the first speed v1 at the region of the weight roller 52', whereby the mutual overlap of the products 48 conveyed by the accelerating conveyor 30 at the higher speed v2 and the second conveyor 14' is increased in accordance with the speed difference between the second speed v2 and the first speed v1.

As can be seen from Figs. 4-7, once a sheet enters the nip between the conveyor 14' and the brake roller 52', same is braked down. At the same time, however, the second sheet or the next following sheet is not decelerated but still conveyed at the higher speed v2. Only once the second sheet also enters the nip between the roller 52' and conveyor 14', same is also decelerated.

However, it is clear that the deceleration of the second sheet is independent from the deceleration of the first sheet and only governed by the time it reaches the nip between the roller 52' and the conveyor 14'. Thus, Auf der Mauer does not teach to "decelerate" the second sheet as soon as the first sheet is decelerated.

Nothing in Auf der Mauer teaches or suggests to modify the braking procedure disclosed therein in such a manner that the first and second sheet are decelerated substantially at the same time.

In addition, Applicants also submit that because claims 5 and 6 depend from claim 1 and claim 16 depends from claim 7, and as dependent claims therefrom, claims 5, 6 and 16 are allowable for at least reasons claims 1 and 7 are allowable. Applicants further submit, argued in part at least immediately above, that claims 5, 6 and 16 are allowable in light of the presence of novel and non-obvious elements contained in claims 5, 6 and 16 that are not otherwise present in claims 1 and 7.

Applicants respectfully submit that the claims are in condition for allowance. The Examiner is invited to contact the below-listed attorney if the Examiner believes that a telephone conference will advance the prosecution of this application.

AMENDMENT AND RESPONSE

In response to the office action mailed July 29, 2003, please amend the above-  
identified application as follows:

In the Claims:

Please amend claim 2 and add new claims 17, 18, 19, and 20 as follows:

1. (Previously Amended) A method of transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine in which the at least two sheets are moved at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the method comprising the following steps:

(a) supplying the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

(b) decelerating the second sheet to a third speed as soon as the first sheet is decelerated to the first speed in the sheet handling machine, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets.

2. (Currently Amended) A method according to claim 1, wherein a leading edge of the first sheet in the sheet transport direction and a leading edge of the second sheet [which is the leading edge] in the sheet transport direction are displaced relative to one another [an-other] by the length of displacement, the first sheet being decelerated at the leading edge thereof and the second sheet being decelerated at a [an] rear edge in the sheet transport direction.

3. (Previously Amended) A method according to claim 1, the method comprising the following steps:

(c) advancing the at least two sheets in the sheet handling machine by a distance which is determined by the sheet format and the length of displacement; and

(d) repeating steps (a) to (c) for an additional pair of sheets arranged in a shingled mode of arrangement in the sheet transport direction.

4. (Original) A method according to claim 3, wherein the additional pair of sheets is deposited in the sheet handling machine shingled in an ascending or descending mode.

5. (Previously Amended) A method according to claim 1, wherein the first speed is 0.25 m/s, the second speed is 3 m/s, and the third speed is 2 m/s.

6. (Previously Amended) A method according to claim 1, wherein the third speed is equal to the first speed.

7. (Previously Amended) A device for transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine which comprises a first transport unit which moves the at least two sheets at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the device comprising:

a feed roll which feeds the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

a brake roll which decelerates the second sheet to a third speed as soon as the first sheet is decelerated by the transport unit, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets.

8. (Previously Amended) A device according to claim 7, wherein the transport unit comprises a first shingle roll which engages the edge of the first sheet constituting the leading edge in the sheet transport direction, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the edge of the second sheet constituting the trailing edge in the sheet transport direction.

9. (Previously Amended) A device according to claim 7, wherein the transport unit comprises a substantially continuously driven conveying belt and a plurality of shingle rolls which are pretensioned towards the conveying belt and which are spaced apart in the sheet transport direction by a distance determined by the sheet format and the sheet displacement.

10. (Previously Amended) A device according to claim 7 comprising a trap, which is arranged between the feed roll and the first shingle roll, the trap causing descending shingles of sheets in a first position and ascending shingles of sheets in a second position.

11. (Previously Amended) A device according to claim 10, wherein the brake roll is associated with a first sheet path along which the at least two sheets travel when the trap is at the first position, an additional brake roll being provided, which is associated with a second sheet path along which the at least two sheets travel when the trap is at the second position.

12. (Previously Amended) A device according to claim 7, wherein the sheet handling machine comprises:

a second transport unit, which is arranged after the first transport unit in the sheet transport direction, the first transport unit collecting the sheets continuously and transferring them to the second transport unit, when a predetermined number of sheets is arranged in the first transport unit, the sheets in the second transport unit being arranged in a shingled mode of arrangement in a sheet transport direction in such a way that the leading edges of the sheets in the sheet transport direction are spaced apart by a certain length of displacement, the second transport unit moving the sheets in a clocked mode in such a way that the sheets are displaced by a predetermined distance in the sheet transport direction, the distance depending on the number of sheets to be distributed and on the sheet displacement; and

a distributing unit which, when the sheets move in the transport unit, discharges from the sheet handling machine the respective leading sheet in the sheet transport direction.

13. (Previously Amended) A device according to claim 7, wherein the paper handling machine comprises:

a second transport unit which is arranged such that it extends parallel to the first transport unit,

a deflection means which is arranged in front of the first and second transport units when seen in the sheet transport direction and which conducts sheets to the first transport unit when occupying a first position and sheets to the second transport unit when occupying a second position, the deflection means switching over from the first to the second position, when a predetermined number of sheets has been received in the respective transport unit, and

a distributing unit arranged after the first and second transport unit when seen in the sheet transport direction,

wherein the transport unit having no sheets supplied thereto moves the sheets in a clocked mode in such a way that the sheets are displaced by a predetermined distance in the sheet transport direction, the distance depending on the number of sheets to be distributed and on the sheet displacement;

wherein, when the sheets are being moved, the distributing unit discharges from the paper handling machine the respective leading sheet in the sheet transport direction.

14. (Previously Amended) A device according to claim 12, wherein the second transport unit comprises a conveying belt and a plurality of transport rolls which are pretensioned towards the conveying belt and which are spaced apart in the sheet transport direction by a distance determined by the sheet displacement and by the sheet format.

15. (Previously Amended) A device according to claim 12, wherein the distributing unit includes a counter which detects the number of sheets distributed.

16. (Previously Amended) A device according to claim 7, wherein the third speed is equal to the first speed.

17. (New) A method of transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine in which the at least two sheets are moved at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the method comprising the following steps:

(a) supplying the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

(b) decelerating the second sheet to a third speed as soon as the first sheet is decelerated to the first speed in the sheet handling machine, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets,

wherein a leading edge of the first sheet in the sheet transport direction and a leading edge of the second sheet in the sheet transport direction are displaced relative to one another by the length of displacement, the first sheet being decelerated at the leading edge thereof and the second sheet being decelerated at a rear edge in the sheet transport direction.

18. (New) A device for transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine which comprises a first transport unit which moves the at least two sheets at a first speed after the transfer, a first and a second sheet of the at least two sheets being spaced by a certain length of displacement in the sheet transport direction, the device comprising:

a feed roll which feeds the at least two sheets in the shingled mode of arrangement to the sheet handling machine at a second speed, the second speed being higher than the first speed; and

a brake roll which decelerates the second sheet to a third speed as soon as the first sheet is decelerated by the transport unit, the third speed being lower than the second speed, thereby maintaining a shingled arrangement of the at least two sheets,

wherein the transport unit comprises a first shingle roll which engages the edge of the first sheet constituting the leading edge in the sheet transport direction, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the edge of the second sheet constituting the trailing edge in the sheet transport direction.

19. (New) A method according to claim 1, wherein, in step (b), the first sheet is decelerated to the first speed by a shingle roll, and the second sheet is decelerated to the third speed by a brake roll

20. (New) A device according to claim 7, wherein the transport unit comprises a first shingle roll which engages the first sheet, and wherein, as soon as the shingle roll has engaged the first sheet, the brake roll engages the second sheet.

REMARKS

The Applicants respectfully traverse and request reconsideration. Applicants wish to thank the Examiner for the notice that claims 2-4 and 8-15 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. Support for new claim 5, 17-20 may be found at least on p.3, ¶¶ 2-7; p. 9, ¶¶ 3 and 4.

Claims 1, 5, 6, 7 and 16 stand rejected under 35 U.S.C. § 103(a) as being obvious based on U.S. Patent No. 5,158,278 (Auf der Maur). However, Auf der Maur does not suggest the transferring of at least two shingled sheets to a sheet handling machine in a manner as defined by the pending claims.

The present invention is concerned with the transferring of at least two shingled sheets to a sheet handling machine wherein the sheets in the sheet handling machine are moved at a first speed after the transfer. As to Claim 1, in the first step the two sheets are supplied with a second speed, which is higher than the first speed. In the second step the second sheet is decelerated to a third speed as soon as the first speed is decelerated to the first speed in the sheet handling machine. In other words, it is clear from the wording of claim 1 that decelerating the two sheets occurs in a manner, which is substantially simultaneous.

Additionally, claim 7 recites three sheet engagement means, the first being the feed roll which feeds the sheets with a second speed, the second being the transport unit which decelerates the first sheet once it arrives at the sheet handling machine, and the second being the brake roll which, as soon as the first sheet is decelerated by the transporting unit, decelerates the second sheet to the third speed.

Accordingly, Auf der Maur fails to teach among other things transferring the shingled sheets to the sheet handling mechanism in a manner such that the sheets still remain shingled whereas the present invention teaches to substantially simultaneously decelerate the first and second sheets, an approach, which is not taught by Auf der Maur.

In contrast, Auf der Maur describes with regard to Figs. 4-7 the steps to be taken for forming a gap in a flow of shingled products 48, and for the subject matter of the present invention the actions taken at the inlet of the handling mechanism 14' is of specific interest, and here especially Fig. 6. As it is described in columns 11 and 12, performing a gap in the flow of products 48 a part of the products is slowed down and the other one is conveyed by

means of conveyor belt 28 at a second speed which is about 20 percent higher than the first speed at which the conveyor 14' operates. As it is outlined in column 12, lines 56-64, the products 48 delivered by the endless conveyor belt or band 28 at the second speed v2 to the conveyor 14' are braked down to the first speed v1 at the region of the weight roller 52', whereby the mutual overlap of the products 48 conveyed by the accelerating conveyor 30 at the higher speed v2 and the second conveyor 14' is increased in accordance with the speed difference between the second speed v2 and the first speed v1.

As can be seen from Figs. 4-7, once a sheet enters the nip between the conveyor 14' and the brake roller 52', same is braked down. At the same time, however, the second sheet or the next following sheet is not decelerated but still conveyed at the higher speed v2. Only once the second sheet also enters the nip between the roller 52' and conveyor 14', same is also decelerated.

However, it is clear that the deceleration of the second sheet is independent from the deceleration of the first sheet and only governed by the time it reaches the nip between the roller 52' and the conveyor 14'. Thus, Auf der Mauer does not teach to "decelerate" the second sheet as soon as the first sheet is decelerated.

Nothing in Auf der Mauer teaches or suggests to modify the braking procedure disclosed therein in such a manner that the first and second sheet are decelerated substantially at the same time.

In addition, Applicants also submit that because claims 5 and 6 depend from claim 1 and claim 16 depends from claim 7, and as dependent claims therefrom, claims 5, 6 and 16 are allowable for at least reasons claims 1 and 7 are allowable. Applicants further submit, argued in part at least immediately above, that claims 5, 6 and 16 are allowable in light of the presence of novel and non-obvious elements contained in claims 5, 6 and 16 that are not otherwise present in claims 1 and 7.

Applicants respectfully submit that the claims are in condition for allowance. The Examiner is invited to contact the below-listed attorney if the Examiner believes that a telephone conference will advance the prosecution of this application.

Title: Method and Device for Transferring At Least Two Shingled Sheets to a Sheet Handling Machine

Attention: Office of Petitions

Mail Stop Petition

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

FAX: (703) 308-6916

NOTE: If information or assistance is needed in completing this form, please contact Petitions Information at (703) 305-9282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus an extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or issue fee;
- (3) Terminal disclaimer with disclaimer fee --required for all utility and plant applications filed before June 8, 1995; and for all design applications; and
- (4) Statement that the entire delay was unintentional.

**1. Petition fee**

☐ Small entity-fee \$ \_\_\_\_\_ (37 CFR 1.17(m)). Applicant claims small entity status. See 37 CFR 1.27.

☒ Other than small entity - fee \$ 1460.00 (37 CFR 1.17(m))

**2. Reply and/or fee**

A. The reply and/or fee to the above-noted Office action in the form of Amendment and Response \_\_\_\_\_ (identify type of reply):

- ☒ has been filed previously on November 26, 2003  
☐ is enclosed herewith.

B. The issue fee of \$ \_\_\_\_\_

- ☐ has been paid previously on \_\_\_\_\_  
☐ is enclosed herewith.

This collection of information is required by 37 CFR 1.137. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

PTO/SB/64 (08-03)

Approved for use 07/31/2006. OMB 0651-0031

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

## 3. Terminal disclaimer with disclaimer fee

- ☒ Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- ☐ A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_ for a small entity or \$ \_\_\_\_\_ for other than a small entity) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

4. STATEMENT: The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(b) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(b) was unintentional (MPEP 711.03(c), subsections (III)(C) and (D))].

**WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.**
